

KAYTUS

Product Overview

KSManage — An infrastructure solution for data centers with diverse computing power, enabling automated configuration management, and intelligent monitoring and alarm for multi-brand and multi-type resources in data centers, helping customers' data centers achieve smart operation and maintenance

Product Features

- **Manage multiple brands and types of equipment**

Compatible with over 5,000 mainstream brands and models of IT equipment, and unified management of equipment from different manufacturers

- **Infrastructure automation**

Breaking down the barriers between software and hardware, it supports the automated control of over 4,000 device models, significantly enhancing deployment efficiency

- **Intelligent management of super nodes**

Provide an intelligent full-stack management engine for super nodes to achieve comprehensive observability and high availability of super nodes

- ◆ Customized large screens support 2D/3D view display, making the status of data center equipment, resource utilization rate, performance indicators, etc. intuitive and visible
- ◆ Support the pre-listing function of devices, assist customers in completing resource planning such as space, power consumption, network, and weighing, provide precise device listing suggestions, and improve planning efficiency
